BOLIHON BEACH RESORT

Admin manual

Admins can do everything in the Staff manual, plus manage user accounts, auto-reply answers and the footer credit in Admin → Users & settings.

CONTENTS

1. Add a user
2. Edit a user, reset a password or disable an account
3. Auto-reply knowledge
4. Footer credit
5. Password help from IT
6. Known limitations

1. Add a user

1. Open **Admin → Users & settings**.
2. In **User administration**, fill in **Full name**, **Email**, **Phone** and **Password** (at least 6 characters).
3. Choose **Privileges**: **Staff - manage operations** or **Admin - manage users and operations**.
4. Tap **Create user**, then give the person their email and password.

2. Edit a user, reset a password or disable an account

1. Tap **Edit** next to the user in **Users and privileges**.
2. Change the details. To reset the password, type it in **New password (optional)**; leave it blank to keep the current one.
3. Tick **Disable this user** to block sign-in without deleting the account. They are signed out everywhere.
4. Tap **Save changes**.

- **Delete** removes an account after you type DELETE. This cannot be undone.
- You cannot disable, demote or delete your own admin account.

3. Auto-reply knowledge

The answers the guest chat sends automatically. The entry whose keywords best match the guest's message is used.

1. Tap **Add information**, or pick an existing entry.
2. Fill in **Information title**, **Sort order** (lower wins a tie), **Trigger keywords** separated by commas and the **Auto-reply response**.
3. Tap **Create information** or **Save information**. **Delete** removes an entry.

4. Footer credit

Change the "Powered by" strip at the bottom of every page: **Badge text**, **Logo letter** (up to 2 characters), **Company name** and **Team credit**. Check the **Preview**, tap **Save footer credit**, then refresh the page.

5. Password help from IT

If no admin can sign in, IT can reset a password on the server: node --env-file=.env.local scripts/set-password.mjs <email> <password>

6. Known limitations

- Guests have no account; the Guest dashboard link only works for staff and admins.
- Recent payments shows only the five newest bookings.
- Only pending bookings can be declined from the dashboard.
- Total revenue counts the full price of deposit-paid bookings.

- Email and SMS are sent only when a booking is created, and only if those services are set up.
